Aurora Desk Accessibility Checklist

Accessibility fixture • Expected checks for HTML, images, and marketing content

Automated checks

• Informative images need meaningful alternative text.

• Buttons and form fields need accessible names or associated labels.

• Links should describe their destination, not merely say 'click here'.

• Heading levels should follow a meaningful hierarchy.

• Text and background colors should meet the applicable contrast threshold where colors are known.

• Status should not be conveyed by color alone.

Human review checks

• Alternative text should communicate the purpose of an image in context.

• Keyboard focus order should follow the intended interaction order.

• Animations should not create unnecessary distraction and should respect reduced-motion preferences.

• Content should use understandable language for its intended audience.

Example violations

• Image alt text: missing.

• Button accessible name: empty.

• Link text: 'click here'.

• Status indicator: red dot with no text label.

• Body text: pale orange on a white background with insufficient contrast.

Reporting guidance

Report only checks that the available input format allows the system to evaluate. Distinguish automated results from manual-review recommendations.

SYNTHETIC TEST DOCUMENT. All names, claims, products, and figures are fictional. Do not use as real brand guidance.
